CHAPTER – I

INTRODUCTION

1.1 INTRODUCTION

EMPLOYER AND EMPLOYEE RELATIONSHIP

The employee relationship definition refers to the working connection between employees and employers in the workplace. In order to produce outcomes that are beneficial to the corporation, managers and subordinates are reliant on one another.

As a result, the two must have a strong relationship. In the contact point field, the management of such a relationship among the two is crucial.

Employee satisfaction rises in direct proportion to the strength of the connection, resulting in improved performance. To qualify for these advantages, one must keep the importance of the employer-employee relationship in sight.

Employers and workers have a formal connection called an employment relationship. It emerges when a person undertakes employment or provides services for a fee within specific circumstances. The practice of managing relationships in a company is known as employee relationship management, or ERM. These connections can be made between the company and its employees and between co-workers on the same level.

Human Resource Management considers employee relationship management to be a distinct discipline. Employee relationship management (ERM) is the procedure of implementing control techniques and procedures to govern employee relationships with one another and with their employers.

THE IMPORTANCE OF EMPLOYER-EMPLOYEE RELATIONSHIP

The relationship between employer and employee is primarily determined by the actions and attitudes of the employer. For instance, the employer generally sets the tone for whether the climate in the work environment will be casual, professional, regimented, creative, etc. The atmosphere that the employer desires. Whichever direction the employer chooses to take things, however, the importance of the employer-employee relationship cannot be overstated, as that relationship largely defines the organization and has far-reaching effects on company culture, employee satisfaction, and turnover rates. The employee-employer relationship is incredibly important for both individuals and organizations. Here's why it matters so much:

- **Productivity and Performance:** A positive relationship between employees and employers often leads to higher levels of engagement, motivation, and job satisfaction. When employees feel valued and supported, they are more likely to put in their best effort, leading to increased productivity and better performance.
- **Communication:** A healthy employee-employer relationship encourages open and effective communication. This allows for clear instructions, feedback, and the ability to address concerns or problems before they escalate.
- **Job Satisfaction:** Feeling respected, understood, and appreciated by employers contributes to overall job satisfaction. Happy employees are more likely to stay in their roles, be productive, and spread positive vibes throughout the workplace.

- **Types of relations at work:**

  Types of relations that exist at work place

  - Employer-employee
  - Manager-subordinate (or rather head -subordinate)
  - Colleagues
  - Employee-internal service provider(HR,finance,etc)
  - Employee -external.

1.2 STATEMENT OF THE PROBLEM

The relationship between employers and employees plays a critical role in shaping workforce performance. Despite advancements in technology and process automation, human factors such as motivation, trust, communication, and leadership remain central to achieving organizational goals.

This study aims to explore how the quality of employer-employee relationships within industrial settings impacts employee performance. It seeks to identify key relational elements such as supervisory support, recognition, job security, and workplace culture that influence productivity, job satisfaction, and retention. Understanding these dynamics is essential for industrial organizations striving to enhance operational outcomes through a more engaged and committed workforce.

1.3 OBJECTIVES OF THE STUDY

- To identify factors that influencing employee-employer relationship.
- To assess the employee's perception about employer-employee relationship.
- To analyse the satisfaction level of employer employee relationship.
- To find out the impact of employer employee relationship on employee performance.
- To examine the study to offer the suggestion to improve the employer& employee relationship.

1.4 SCOPE OF THE STUDY

- To study the level of employee relationship with the company.
- To study its impact on the performance of the employees.
- To suggest different steps for making employer-employee relationship effective if there is any deviation.

1.5 LIMITATIONS OF THE STUDY

This study aims to provide valuable insights into the dynamics of employer-employee relationships and their influence on employee performance, several limitations must be acknowledged:

- **Scope Restriction**: The study is confined to selected industrial organizations and may not reflect the broader trends across other sectors such as services, education, or healthcare.
- **Time Constraints**: The study is conducted within a specific time frame, which may not account for long-term changes in employer-employee relationships or performance trends.
- **External Factors**: Variables such as economic conditions, labour laws, technological changes, and organizational restructuring may also impact employee performance but are beyond the scope of this study.
- **Generalizability**: Due to contextual differences in industrial settings, the results may not be universally applicable to all industries or organizational cultures.

CHAPTER – II

REVIEW OF LITERATURE

2.1 REVIEW OF LITERATURE:

- **According to Murphy (2024**) – Advocated for fostering a growth mindset within organizations to promote innovation and ethical behaviour, highlighting its positive effect on employer- employee relationships. This article explores the role of mindsets in organizational contexts. We start by describing the evolution of mindset theory and research and review why mindsets matter for people's workplace outcomes.
- **According to Venkataraman (2023)** – Provided a critical reflection on employment relations in India, emphasizing the need for a sociologically informed understanding of employer-employee dynamics. The company has the role of workplace profitability in the current working areas of the company. This exploratory study evaluated employee strategic alignment in the context of employee adoption of a lean manufacturing program, and investigated relationships
- **According to Otoo (2022)** – Examined HR development practices' impact on organizational commitment in SMEs, finding that effective HRD initiatives.
  A significant influence of HRD practices on continuance commitment was observed.
  A non-significant influence of HRD practice on normative commitment was reported.
  Research limitations/implications – The present study emphasis on SMEs may limit how broadly the results may be applied. Practical implications – The study will aid SMEs in developing workplace strategies, policies and policies that can immensely improve employee loyalty, fulfilment and satisfaction
- **According to Guntuku et al. (2022)** – Examined the effect of employer-employee relationships on engagement and task performance, finding a significant positive correlation between strong relationship and enhanced engagement.casopisi.junis.ni.ac.rs. To investigate the association between the dependent variables "employee engagement" and "task performance" and the independent variable "employer-employee relationship", hypotheses were constructed. A questionnaire was circulated to respondents as a research instrument, and information was collected from a sample of 100 people. It is inferred that the employer-employee relationship is significantly connected with employee engagement

- **According to Dr. K.R. Subramanian (2019),** had done research on the topic ―Employer employee relationship and impact on organization structure and strategy. The objective of study to identify impact of relationship between employee-employer in the organization. The result of study was that organizational structures regulate the flow of information within the organization, which leads to effects on both the strategic intent and the realized strategy of business organizations.
- **According to Zuraina data Mansor and Saitaifah adman (2015),** had done research on the topic ―the influence of employer's behaviour, communication and psychological ownership in promoting the employee-employer relationship in small and medium sized enterprises. the objective of study was to study the influence of employer's behaviour towards employee and its relationship in promoting employee and employer relationship in the small and medium sized enterprises, to study the influence of communication among employee and employer that influences their relationship, Employer's behaviour was found to be the top influence to employee employer relationship, while communication was second and third was psychological ownership.
- **According to Stroh Meier, S. (2013)** In his study said that worker relationship management constitutes an rising fashion of dealing with human assets thru constructing and retaining individualized and collectively precious relationships with personnel based totally on data technology. As a result, a primary popular define of an exciting and ambitious idea is offered. based at the outline, essential implications for similarly conceptual elaboration, theoretical basis and empirical assessment of ERM are derived to indicate guidelines for destiny research.
- **According to Sadikoglu .E., & Zehir .C (2010),** They positioned that investigating the consequences of innovation and employee usual overall performance on the between standard first-class manipulate practices and company ordinary overall performance. The effects from studies of the relationship and the look at additionally offers managerial and studies implications, studies boundaries, and hints for future research.

2.2 INDUSTRY PROFILE

- The manufacturing industry is exposed to severe global competitions and its business environment is changing rapidly. It is very difficult to forecast a market demand which was rather stable and predictable in the past.
- The industry is now required to adapt itself to this environmental change. Therefore, it is necessary to develop a new production system which can handle fluctuations quickly and flexibly in production volume and product life.
- In recent examples of new production systems, we can see practical applications of human-based production systems, so-called cell production method in which attention is given to human flexibility.
- This production system, however, still cannot economically compete with automated production systems in the case that production volume and period do not fluctuate so much by chance.

Core operations

- **Conversion process:** Transforms raw materials into finished or intermediate goods using machinery, labour, and various processes like chemical, biological, or assembly.
- **Scope:** Includes activities from handicraft to high-tech production, but is most commonly associated with large-scale industrial production.
- **Key activities:** Encompasses planning, quality control, industrial maintenance, research and development, and supply chain management.

Major trends and future outlook

- **INDUSTRY 4.0 :** The current phase of manufacturing is defined by the integration of digital technologies like the Internet of Things (IoT), artificial intelligence (AI), and robotics to improve efficiency and competitiveness.
- **Digital transformation:** This trend involves automation, digitalization, and process-driven production, necessitating new skills for workers in areas like robotics programming and process control.

- **Supply chain modernization:** Companies are increasingly investing in supply chain planning software, focusing on better collaboration, big data, and advanced analytics to enhance visibility and mitigate risks.
- **Reshoring:** Factors like geopolitical tensions and rising costs in other countries are leading some companies to bring production closer to their end markets.
- **Talent shortage:** There is a growing demand for skilled professionals in science, technology, engineering, and mathematics (STEM) disciplines to support technological development, but the supply of graduates often lags behind demand.

MARKET SIZE

- Manufacturing is emerging as a central pillar of India's economic growth, contributing around 16-17% of GDP and employing over 27 million workers. The sector's strength lies in the performance of key industries such as automotive, engineering, chemicals, pharmaceuticals, consumer durables, electronics, and textiles. Supported by government initiatives like Make in India and production-linked incentive (PLI) schemes, India is targeting manufacturing to account for 25% of GDP in the coming years.
- Technology is playing a transformative role in reshaping the industry. Once anchored by the machine tool sector, India is now moving towards automation, digitalisation, and process-driven production.
- Digital transformation has spurred innovation, improved efficiency, and positioned manufacturers to remain competitive in global markets. The sector's momentum was reflected in July 2025, when the HSBC India Manufacturing PMI hit a 16-month high of 59.1, driven by the fastest increase in factory orders in nearly five years.
- The government has reinforced this growth with policy support. The National Manufacturing Policy has evolved into the new National Manufacturing Mission, announced in Union Budget 2025-26, which focuses on five key areas: ease and cost of doing business, a future-ready workforce, vibrant MSMEs, access to technology, and quality manufacturing.

2.3 COMPANY PROFILE:

Vasanthi Engineering - Manufacturers and service providers of : Mixing vessel, SS Storage trolley, Liquid filling machine, Detergent soap mixer, Vacuum plodder, Soap cutting Machine, SS Slot chain conveyor, Belt conveyor, Ribbon blender, SS Cauge mill and Pouch machine. Established in 2012 ,India Vasanthi Engineering The supplier company is located in Puducherry, Puducherry and is one of the leading suppliers of machine in bulk from us for the best quality products and service. Vasanthi engineering's provides Ss steal coating services to augment its product offerings in architectural and industrial applications. The one of its kind environment-friendly ss steal coating technology is capable of achieving a 1/1000 mm level of accuracy. The process involves ss steal dispersion, electrostatic charge, and curing. It gives customers one of the most durable colours and long-lasting quality finish ss steal coating , resistant to fading, scratching, wearing, and peeling.

A range of attractive RAL shades and tailored hues in glossy, semi-glossy, matte-textured and metallic finishes are available for its clients. To certify uniform coating, it uses technologically equipped Nordson USA spray guns. The non-chromate pre-treatment and USA-made automatic facilities of the spray system avoid toxic chemicals in the process, thus making it environment- friendly. The entire ss steal coating plant is sealed to prevent the accumulation of dust particles on the coated profiles surface. The plant is geared to coat extrusions up to 7.5 meters.

2.4 PRODUCTS:

Mixing vessel

Liquid filling vessel

Electric cutter

2.5 COMPANY DETAILS:

Nature of Business	Manufacturer
Additional Business	Factory / Manufacturing
Company CEO	S. Thiagarajan
GST Registration Date	01-07-2017
Legal Status of Firm	Proprietorship
Annual Turnover	40 L - 1.5 Cr(2022-2023)
GST Partner Name	Vasanthi

CHAPTER – III
RESEARCH AND METHODOLOGY

3.1 RESEARCH:

Research is defined as the development of new knowledge and or the creative use of existing knowledge in order to generate new concepts, approaches, and understandings. This could require synthesizing and interpreting previous studies to develop new and innovative outcomes.

Research is also defined as a way of thoroughly considering research on a certain subject or problem using scientific methodologies. Research is a systematic investigation into describing, explaining, predicting, and regulating an observable event.

3.1.1 RESEARCH METHODOLOGY

Research Methodology refers to the systematic approach and techniques used to conduct research and gather relevant data to address research questions or objectives. It encompasses the overall design, procedures, tools and analytical methods employed in a research study.

3.2 RESEARCH DESIGN

Research design is the specification of the method and procedure for acquiring the information needed to solve the problem. The research design followed for this research study is descriptive research design where we find a solution to an existing problem. The problem of this study is to find the employer and employee relationship in vasanthi engineering industries.

3.2.1 DESCRIPTIVE RESEARCH DESIGN:

Descriptive studies aim at portraying accurately the characteristics of a particular group or solution. The main aim is to obtain complete and accurate information in the descriptive studies the procedure to be used must be carefully planned. The research design must make enough for protection against bias and must maximize reliability with the concern for the economical completion of the research study.

1. Formulating the objectives of the study.
2. Defining the population and selecting the sample.
3. Designing the method of data collection.
4. Analysis if the data
5. Conclusion and recommended for further improvements in the practices.

3.3 COLLECTION OF DATA

Various data were collected for this study for the understanding of the research and study and for the analysis of the data by collecting data through questionnaire. The two main sources of data are Primary data and Secondary Data.

3.3.1 PRIMARY DATA

Primary data is known as the data collected for the first time through field survey, such data are collected with specific set objectives. Primary data always reveals the cross- section picture of anything studied. This is needed in research to study the effect or impact of any policy.

3.3.2 SECONDARY DATA

Secondary data refers to the information or facts already collected. Such data are collected with the objectives of understanding the past status of any variable data collected and reported by some source is accessed and used for the objectives of the study. The secondary data were collected from

- ✓ Magazines
- ✓ Books
- ✓ Journals
- ✓ Records maintained by HR department
- ✓ Company websites.

3.3.4 POPULATION

A population is the complete set group of individuals, whether that group comprises a nation or a group of people with a common characteristic. In statistics, a population is the pool of individuals from which a statistical sample is drawn for a study. Thus, any selection of individuals grouped by a common feature can be said to be a population. The population size is 120 in the organizations.

3.3.4 SAMPLE DESIGN

A sample design is a method for selecting a representative sample from a population. It refers to the method or procedure used by the researcher to pick things for the sample. Sample design also leads to a technique for determining the sample size, or the number of things to be included in the sample. As a result, sample design is set prior to data collection. The researcher should select samples that are dependable and acceptable for his research topic from a variety of sample design techniques.

3.4 CONVENIENT SAMPLING:

Convenient sampling is a non-probability sampling method where units are selected for inclusion in the sample because they are the easiest for the researcher to access. This can be due to geographical proximity, availability at a given time, or willingness to participate in the research.

3.4.1 SAMPLING FRAME

A sampling frame is a researcher's list or device to specify the population of interest. It's a group of components that a researcher can use to select a sample from the population. Limited resources and accessibility might prohibit researchers from collecting data from all target population segments.

3.4.2 Sampling Size

A sample size refers to a portion of the population selected for a survey or investigation. The sample size is a crucial aspect of any statistical analysis as it affects the accuracy and reliability of the results. The sample size consists of 120 employees and employers in Vasanthi engineering industries.

The respondent size: 104 out of 120 sample size

3.5 DATA COLLECTION TOOL

A data collection tool refers to the method or instrument used to gather data for analysis. It is a specific technique or tool employed to collect information or observations from participants or sources related to the project.

3.5.1 QUESTIONNAIRE

A questionnaire is a research tool featuring a series of questions used to collect useful information from respondents. These instruments include either written or oral questions and comprise an interview-style format. A research questionnaire is typically a mix of close- ended questions and open-ended questions.

3.5.2 VALIDITY AND RELIABILITY

Validity refers to the accuracy of a measure (whether the results really do represent what they are supposed to measure). Reliability refers to the consistency of a measure (whether the results can be reproduced under the same conditions). Validity and Reliability are both about how well a method measures something.

DATA ANALYSIS TOOLS:

a) CORRELATION TEST

The Correlation Test is a statistical method used to find the relationship between two variables**.** It shows how one variable changes when the other one changes. The result is given as a correlation coefficient (r)**,** which can be positive, negative, or zero. A positive correlation means both variables increase together, while a negative correlation means one increases when the other decreases. If the value is zero, it indicates there is no relationship between the variables.

b) MULTIPLE REGRESSION TEST

The Multiple Regression Test is a statistical method used to examine the relationship between one dependent variable and two or more independent variables. It helps to understand how each factor influences the outcome. This test is commonly used to predict values and identify which factors have the strongest impact. It also shows whether the relationship between the variables is positive or negative. Overall, multiple regression helps in better decision making based on multiple influencing factors.

c) ONE WAY ANOVA TEST

The One-Way ANOVA Test is a statistical method used to compare the mean values of three or more groups. It helps to check whether the differences among the group averages are significant or just occurred by chance. This test is used when there is one independent variable and one dependent variable. If the ANOVA result is significant, it means at least one group mean is different from the others. It is commonly used in research to analyze variations between multiple groups.

CHAPTER IV

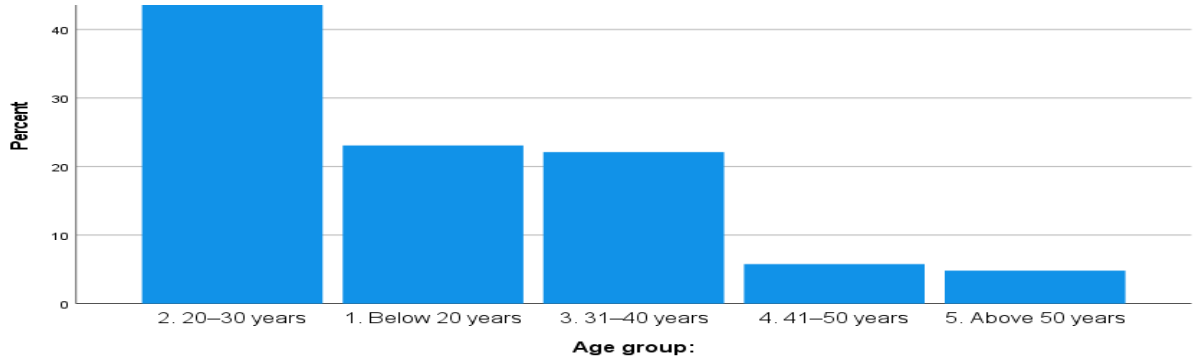

DATA ANALYSIS AND INTERPRETATIONS

Table 4.1 Table Showing Age of the respondents

Age group	Frequency	Percent
Below 20 years	24	23.1
20–30 years	46	44.2
31–40 years	23	22.1
41–50 years	6	5.8
Above 50 years	5	4.8
Total	**104**	**100.0**

Source: Primary data

Chart: 4.1 Chart Showing Age of the respondents

Source: Primary data

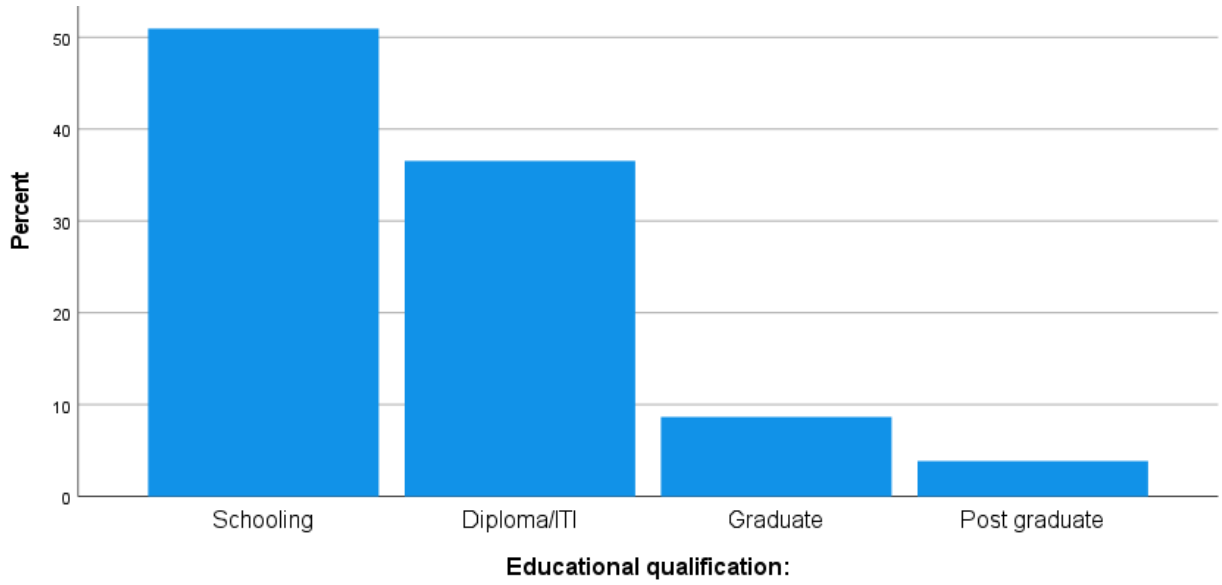

Interpretations From the above table, the majority of respondents (44.2%) belong to the 20–30 years age group, indicating a young workforce. About 23.1% are below 20 years, while 22.1% fall in the 31–40 years category. The older age groups (41–50 years and above 50 years) constitute only 5.8% and 4.8% respectively. This suggests that the organization primarily employs younger employees. The dominance of the 20–30 age group may influence energy levels, adaptability, and openness to new practices.

Table 4.2 Table Showing Educational Qualification of the Respondents

Educational qualification	Frequency	Percent
Schooling	53	51.0
Diploma/ITI	38	36.5
Graduate	9	8.7
Post graduate	4	3.8
Total	**104**	**100.0**

Source: Primary data

Chart: 4.2 Chart Showing Educational Qualification of the Respondents

Source: Primary data

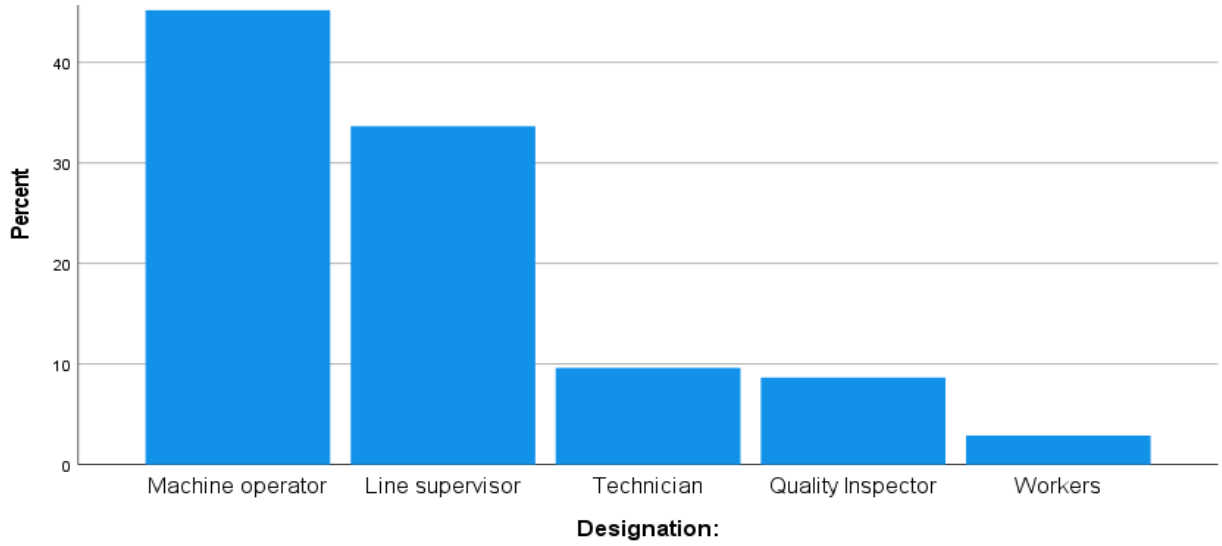

Interpretations From the above table, over half of the respondents (51.0%) have only schooling as their highest qualification, followed by 36.5% holding Diploma/ITI. Graduates and postgraduates form a smaller portion at 8.7% and 3.8% respectively. This reflects a workforce with basic to intermediate technical education. The low percentage of higher-degree holders indicates limited representation of advanced academic profiles

Table 4.3 Table Showing Designation of the respondents

Designation	Frequency	Percent
Machine operator	47	45.2
Line supervisor	35	33.7
Technician	10	9.6
Quality Inspector	9	8.7
Workers	3	2.9
Total	**104**	**100.0**

Source: Primary data

Chart: 4.3 Chart Showing Designation of the respondents

Source: Primary data

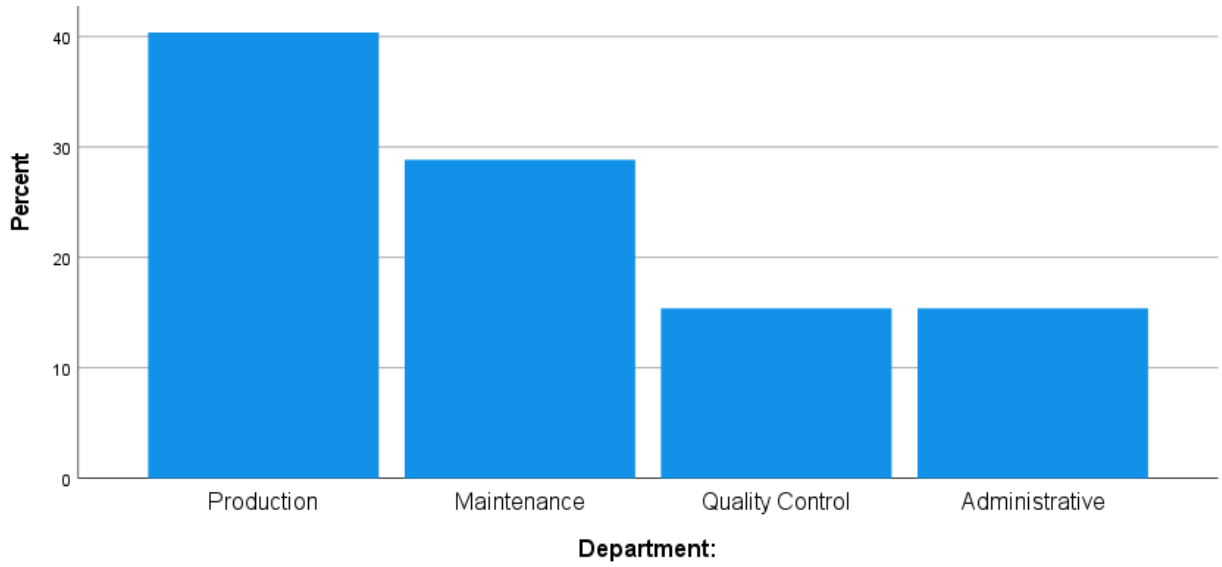

Interpretations From the above table, machine operators form the largest group (45.2%), followed closely by line supervisors (33.7%). Technicians and quality inspectors account for 9.6% and 8.7% respectively, while general workers are only 2.9%. This distribution highlights a frontline operational focus. The high presence of operators and supervisors suggests a production-heavy structure.

Table 4.4 Table Showing Department of the respondents

Department	Frequency	Percent
Production	42	40.4
Maintenance	30	28.8
Quality Control	16	15.4
Administrative	16	15.4
Total	**104**	**100.0**

Source: Primary data

Chart: 4.4 Chart Showing Department of the respondents

Source: Primary data

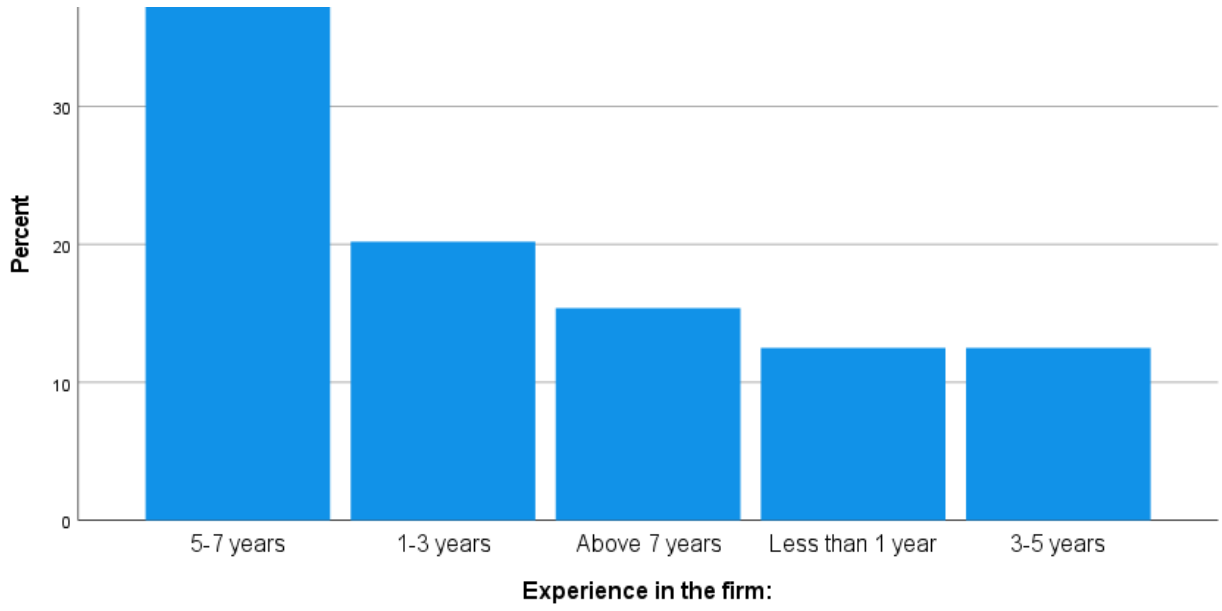

Interpretations From the above table, the Production department has the highest representation (40.4%), followed by Maintenance (28.8%). Quality Control and Administrative departments each contribute 15.4%. This indicates a strong operational and support base centered around manufacturing. The balanced presence of QC and admin shows attention to process compliance and management.

Table 4.5 Table Showing Experience in the Firm

Experience in the firm	Frequency	Percent
Less than 1 year	13	12.5
1-3 years	21	20.2
3-5 years	13	12.5
5-7 years	41	39.4
Above 7 years	16	15.4
Total	**104**	**100.0**

Source: Primary data

Chart: 4.5 Chart Showing Experience in the Firm

Source: Primary data

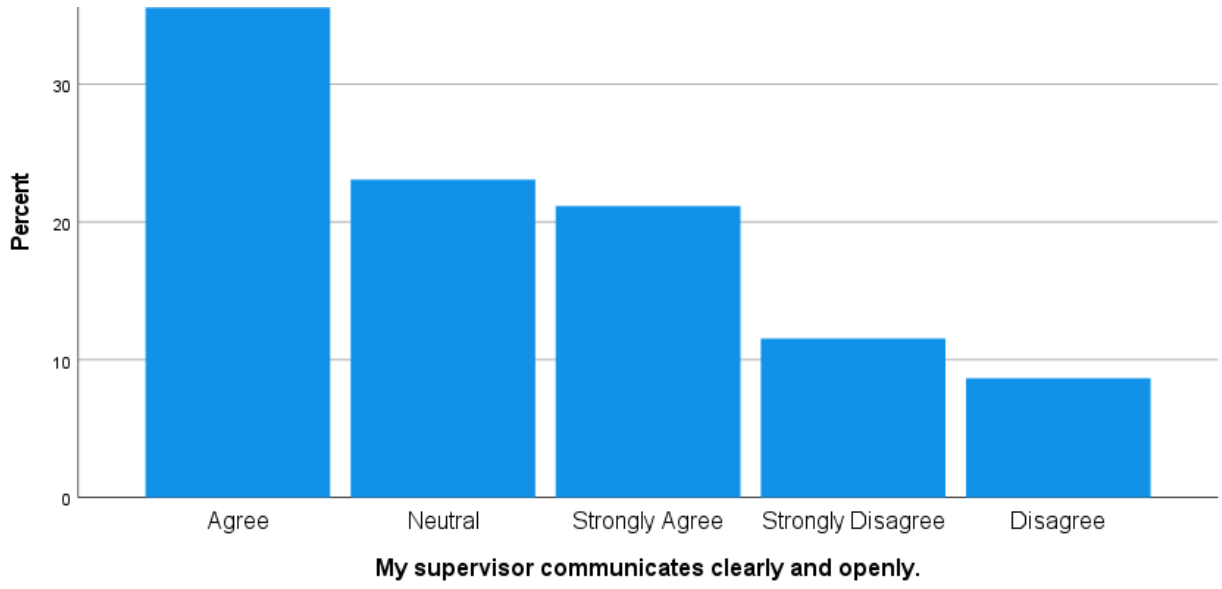

Interpretations From the above table, the largest group (39.4%) has 5–7 years of experience, indicating a stable mid-tenure workforce. About 20.2% have 1–3 years, while 15.4% exceed 7 years. Newer employees (less than 1 year and 3–5 years) each form 12.5%. This mix reflects moderate retention with a core experienced base.

Table 4.6 Table Showing Supervisor Communicates Clearly and Openly

Response	Frequency	Percent
Strongly Disagree	12	11.5
Disagree	9	8.7
Neutral	24	23.1
Agree	37	35.6
Strongly Agree	22	21.2
Total	**104**	**100.0**

Source: Primary data

Chart: 4.6 Chart Showing Supervisor Communicates Clearly and Openly

Source: Primary data

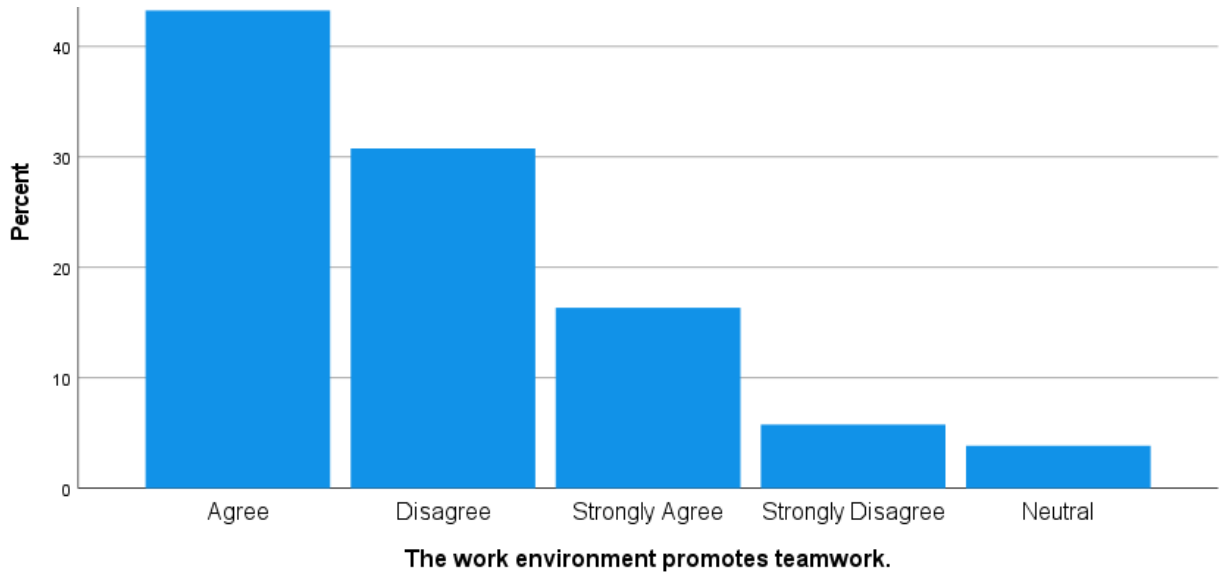

Interpretations From the above table, a combined 56.8% (Agree + Strongly Agree) believe their supervisor communicates clearly and openly, while 20.2% disagree or strongly disagree. Neutral responses stand at 23.1%. This shows a generally positive perception of supervisory communication. However, one-fifth expressing dissatisfaction signals room for improvement in transparency.

Table 4.7 Table Showing Work Environment Promotes Teamwork

Response	Frequency	Percent
Strongly Disagree	6	5.8
Disagree	32	30.8
Neutral	4	3.8
Agree	45	43.3
Strongly Agree	17	16.3
Total	**104**	**100.0**

Source: Primary data

Chart: 4.7 Chart Showing Work Environment Promotes Teamwork

Source: Primary data

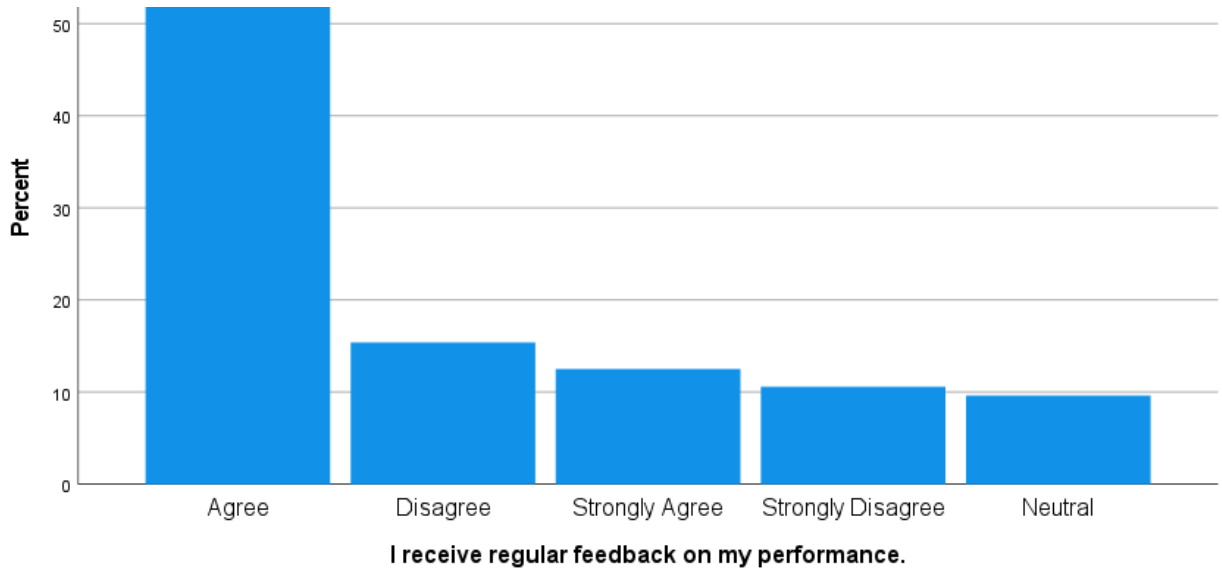

Interpretations From the above table, 59.6% (Agree + Strongly Agree) feel the work environment promotes teamwork, whereas 36.6% disagree or strongly disagree. Only 3.8% remain neutral. While a majority support the presence of teamwork, a significant minority perceives it lacking. This split highlights inconsistent team dynamics across units.

Table 4.8 Table Showing Regular Feedback on Performance

Response	Frequency	Percent
Strongly Disagree	11	10.6
Disagree	16	15.4
Neutral	10	9.6
Agree	54	51.9
Strongly Agree	13	12.5
Total	**104**	**100.0**

Source: Primary data

Chart: 4.8 Chart Showing Regular Feedback on Performance

Source: Primary data

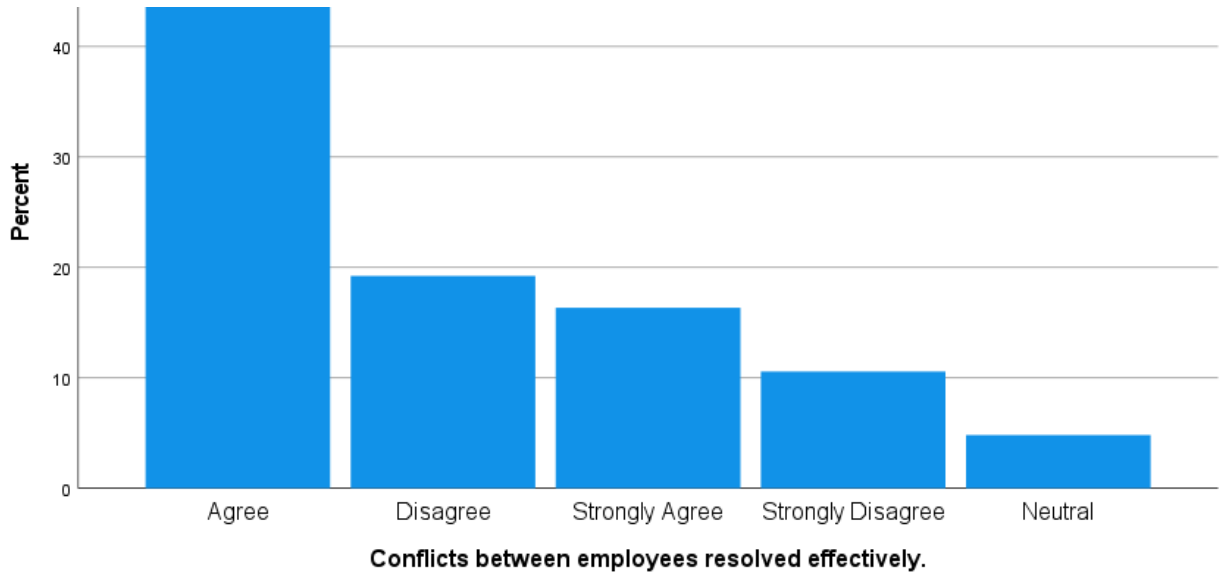

Interpretations From the above table, 64.4% (Agree + Strongly Agree) report receiving regular feedback, against 26.0% who disagree or strongly disagree. Neutral responses are 9.6%. The majority experience consistent performance reviews. Still, over a quarter not receiving feedback indicates gaps in the evaluation process.

Table 4.9 Table Showing Conflicts Between Employees Resolved Effectively

Response	Frequency	Percent
Strongly Disagree	11	10.6
Disagree	20	19.2
Neutral	5	4.8
Agree	51	49.0
Strongly Agree	17	16.3
Total	**104**	**100.0**

Source: Primary data

Chart: 4.9 Chart Showing Conflicts Between Employees Resolved Effectively

Source: Primary data

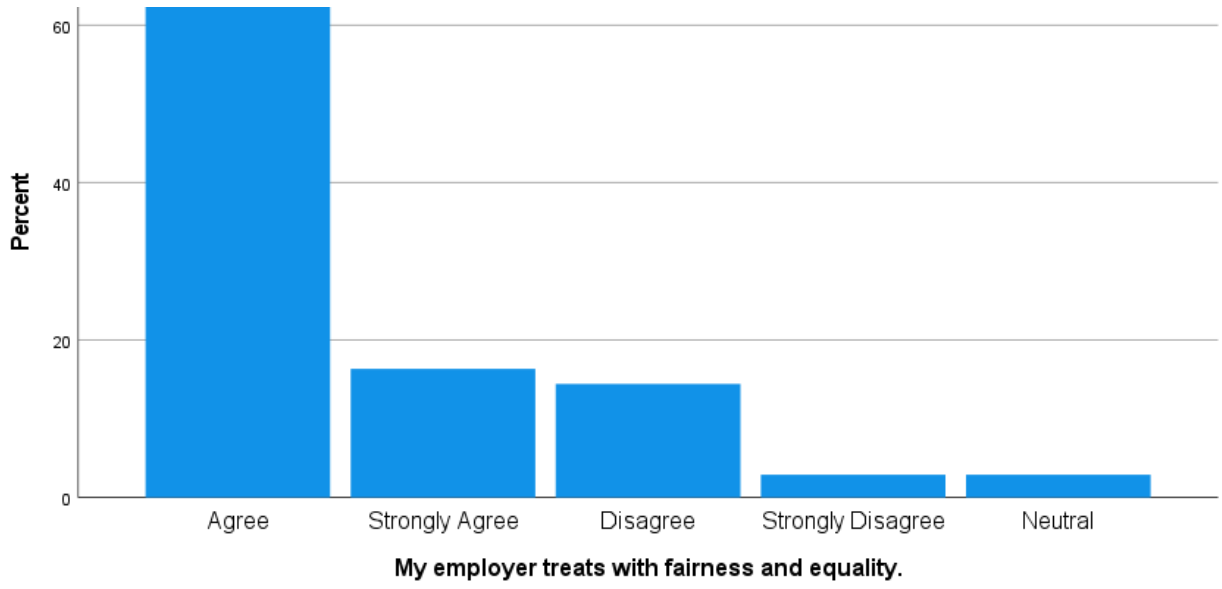

Interpretations From the above table, 65.3% (Agree + Strongly Agree) find conflicts resolved effectively, while 29.8% disagree or strongly disagree. Neutral views are minimal at 4.8%. Most employees trust the conflict resolution mechanism. However, nearly 30% dissatisfaction calls for stronger mediation practices.

Table 4.10 Table Showing Employer Treats with Fairness and Equality

Response	Frequency	Percent
Strongly Disagree	3	2.9
Disagree	15	14.4
Neutral	3	2.9
Agree	66	63.5
Strongly Agree	17	16.3
Total	**104**	**100.0**

Source: Primary data

Chart: 4.10 Chart Showing Employer Treats with Fairness and Equality

Source: Primary data

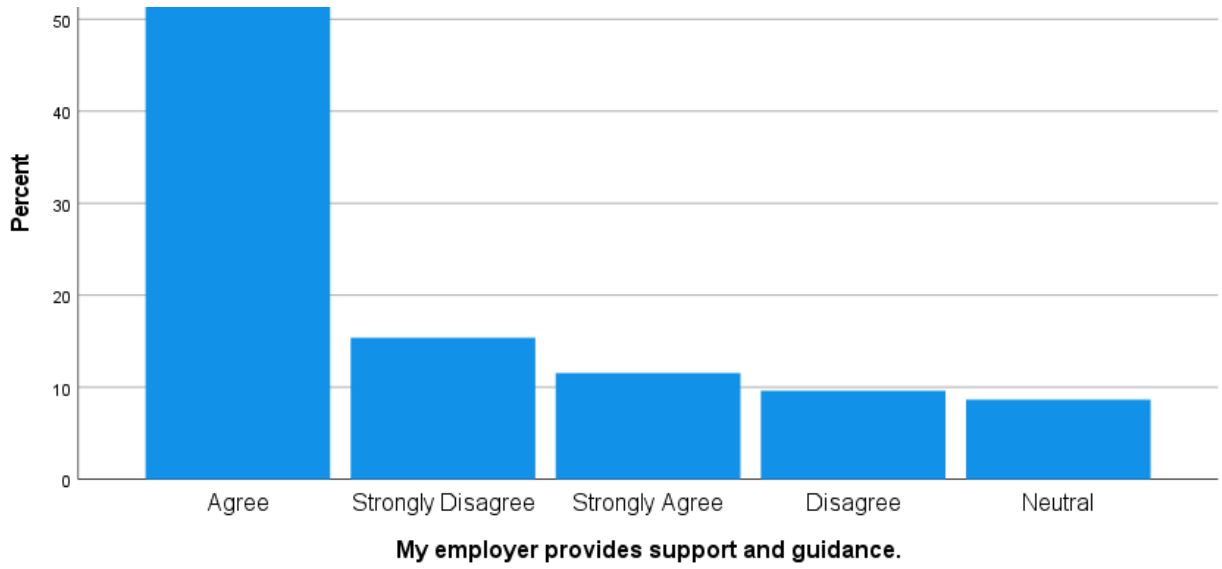

Interpretations From the above table, a strong 79.8% (Agree + Strongly Agree) perceive fair and equal treatment by the employer, with only 17.3% disagreeing or strongly disagreeing. Neutral responses are 2.9%. This reflects high confidence in employer impartiality. The low dissent rate reinforces a culture of equity.

Table 4.11 Table Showing Employer Provides Support and Guidance

Response	Frequency	Percent
Strongly Disagree	16	15.4
Disagree	10	9.6
Neutral	9	8.7
Agree	57	54.8
Strongly Agree	12	11.5
Total	**104**	**100.0**

Source: Primary data

Chart: 4.11 Chart Showing Employer Provides Support and Guidance

Source: Primary data

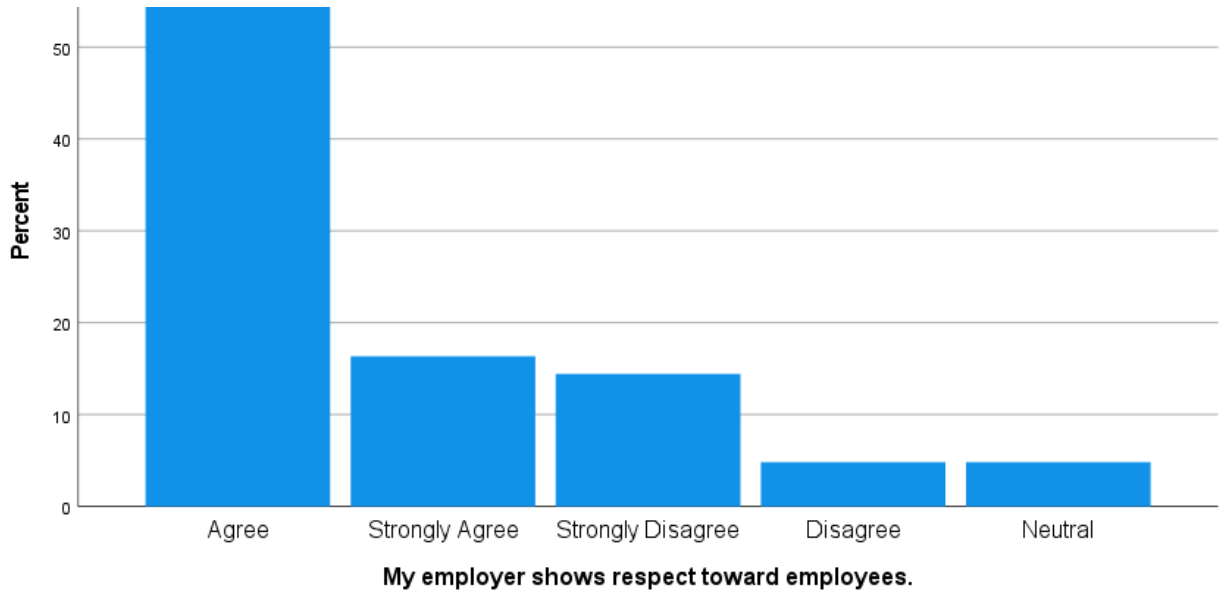

Interpretations From the above table, 66.3% (Agree + Strongly Agree) acknowledge employer support and guidance, while 25.0% disagree or strongly disagree. Neutral stands at 8.7%. A clear majority feel supported in their roles. Yet, one-fourth perceiving inadequate guidance points to uneven support distribution.

Table 4.12 Table Showing Employer Shows Respect Toward Employees

Response	Frequency	Percent
Strongly Disagree	15	14.4
Disagree	5	4.8
Neutral	5	4.8
Agree	62	59.6
Strongly Agree	17	16.3
Total	**104**	**100.0**

Source: Primary data

Chart: 4.12 Chart Showing Employer Shows Respect Toward Employees

Source: Primary data

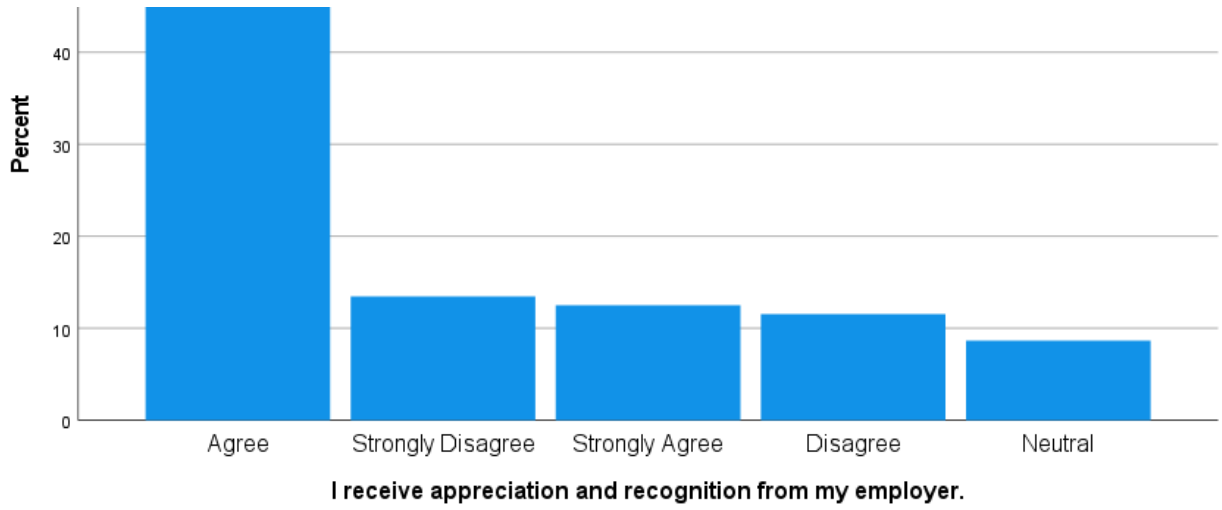

Interpretations From the above table, 75.9% (Agree + Strongly Agree) feel respected by the employer, against 19.2% who disagree or strongly disagree. Neutral responses are 4.8%. Respect is a strong positive attribute in employer conduct. The minority dissent suggests isolated instances of perceived disrespect.

Table 4.13 Table Showing Appreciation and Recognition from Employer

Response	Frequency	Percent
Strongly Disagree	14	13.5
Disagree	12	11.5
Neutral	9	8.7
Agree	56	53.8
Strongly Agree	13	12.5
Total	**104**	**100.0**

Source: Primary data

Chart: 4.13 Chart Showing Appreciation and Recognition from Employer

Source: Primary data

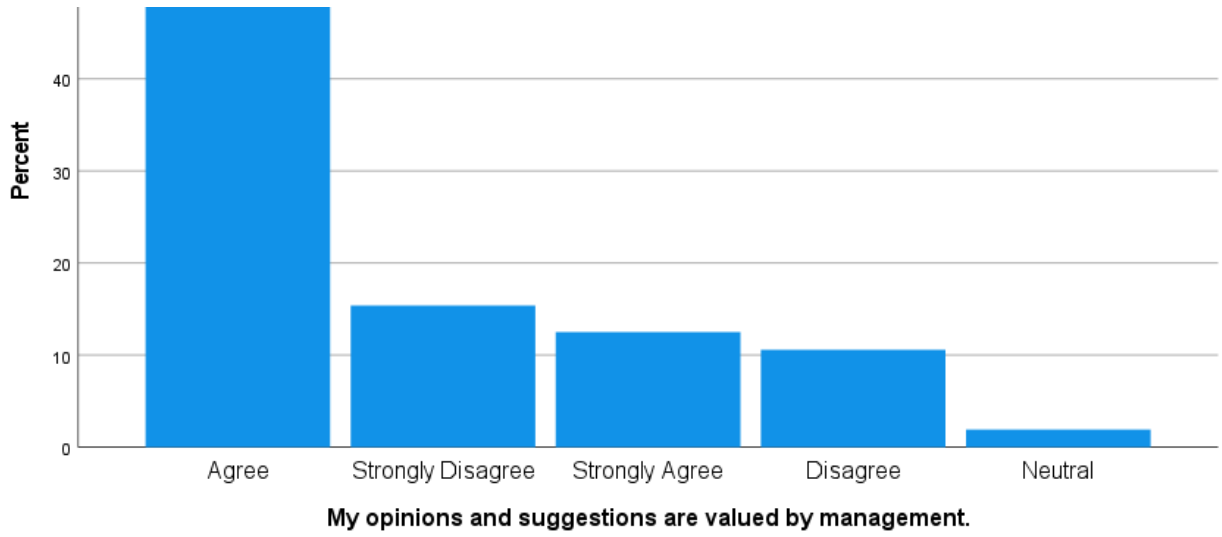

Interpretations From the above table, 66.3% (Agree + Strongly Agree) receive appreciation and recognition, while 25.0% disagree or strongly disagree. Neutral is 8.7%. Recognition is experienced by a solid majority. However, a quarter feeling unrecognized indicates a need to broaden acknowledgment efforts.

Table 4.14 Table Showing Opinions and Suggestions Valued by Management

Response	Frequency	Percent
Strongly Disagree	16	15.4
Disagree	11	10.6
Neutral	2	1.9
Agree	62	59.6
Strongly Agree	13	12.5
Total	**104**	**100.0**

Source: Primary data

Chart: 4.14 Chart Showing Opinions and Suggestions Valued by Management

Source: Primary data

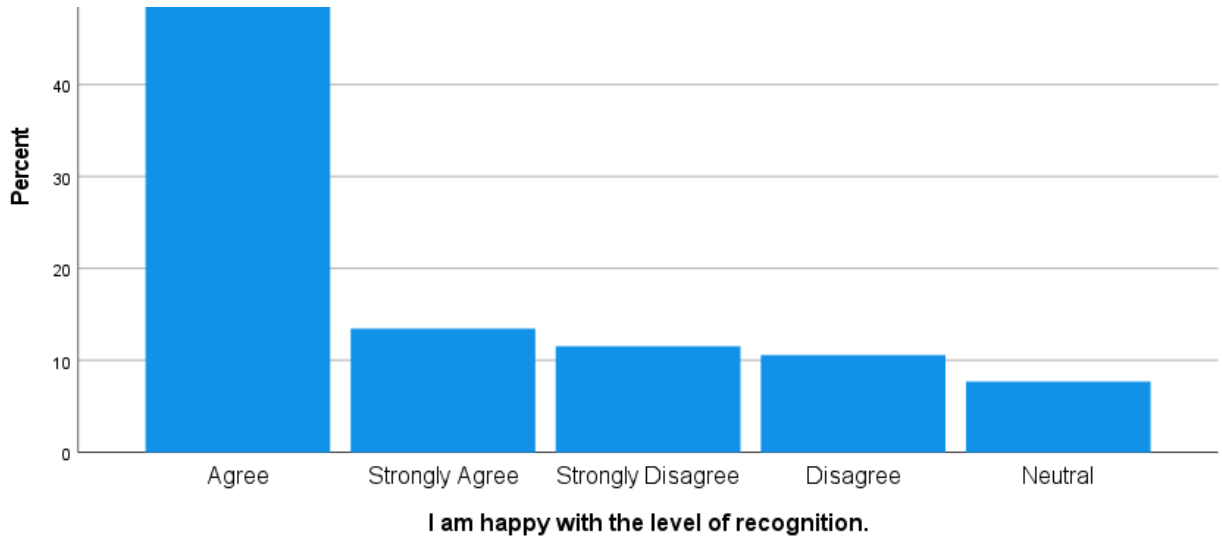

Interpretations From the above table, 72.1% (Agree + Strongly Agree) believe their opinions are valued, with 26.0% disagreeing or strongly disagreeing. Neutral responses are minimal at 1.9%. Management is largely seen as receptive to employee input. The notable dissent group reflects pockets where voice is stifled.

Table 4.15 Table Showing Happy with Level of Recognition

Response	Frequency	Percent
Strongly Disagree	12	11.5
Disagree	11	10.6
Neutral	8	7.7
Agree	59	56.7
Strongly Agree	14	13.5
Total	**104**	**100.0**

Source: Primary data

Chart: 4.15 Chart Showing Happy with Level of Recognition

Source: Primary data

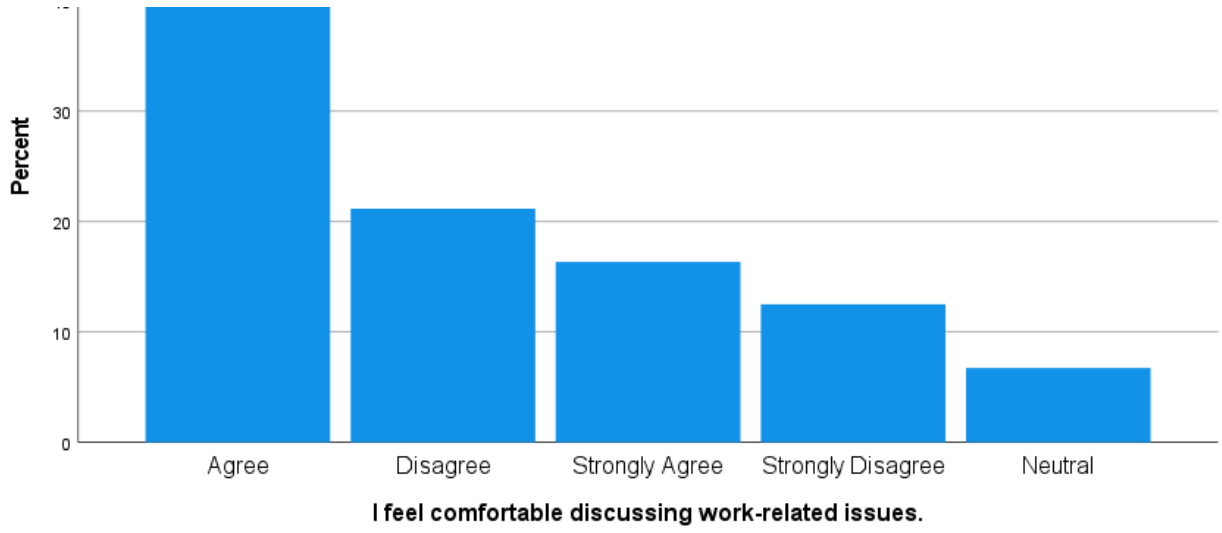

Interpretations From the above table, 70.2% (Agree + Strongly Agree) are happy with recognition levels, while 22.1% disagree or strongly disagree. Neutral stands at 7.7%. Satisfaction with recognition is predominant. Still, over one-fifth express discontent, underlining inconsistent reward practices.

Table 4.16 Table Showing Comfortable Discussing Work-Related Issues

Response	Frequency	Percent
Strongly Disagree	13	12.5
Disagree	22	21.2
Neutral	7	6.7
Agree	45	43.3
Strongly Agree	17	16.3
Total	**104**	**100.0**

Source: Primary data

Chart: 4.16 Chart Showing Comfortable Discussing Work-Related Issues

Source: Primary data

Interpretations From the above table, 59.6% (Agree + Strongly Agree) feel comfortable discussing issues, against 33.7% who disagree or strongly disagree. Neutral is 6.7%. A majority experience open communication channels. The high disagreement rate signals fear or reluctance in a significant segment.

Table 4.17 Table Showing Employer Motivates and Supports Effectively

Response	Frequency	Percent
Strongly Disagree	7	6.7
Disagree	9	8.7
Neutral	6	5.8
Agree	70	67.3
Strongly Agree	12	11.5
Total	**104**	**100.0**

Source: Primary data

Chart: 4.17 Chart Showing Employer Motivates and Supports Effectively

Source: Primary data

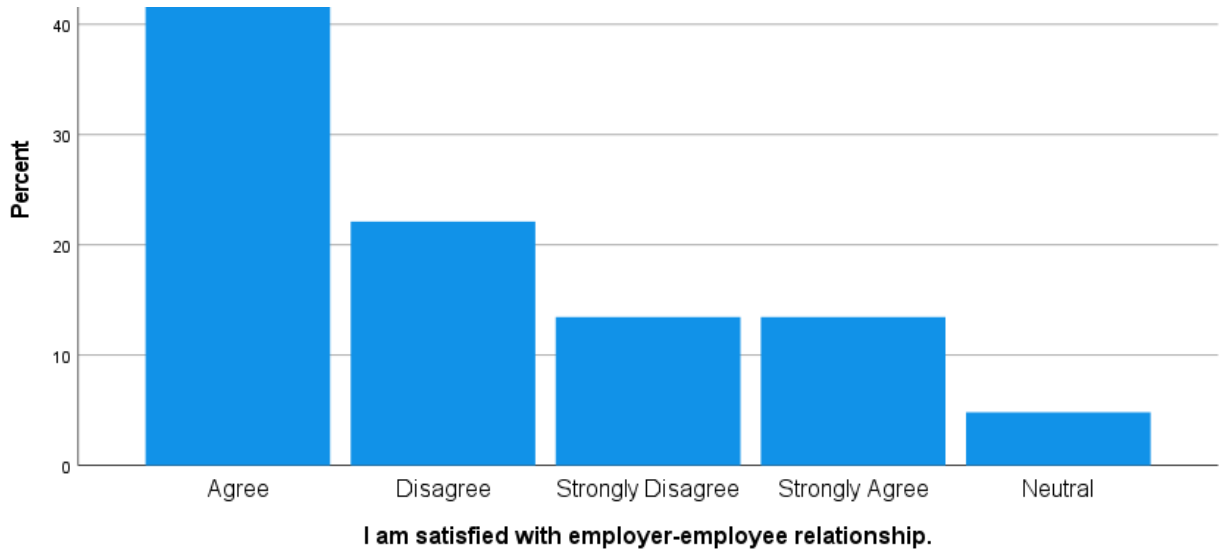

Interpretations From the above table, 78.8% (Agree + Strongly Agree) find employer motivation and support effective, with only 15.4% disagreeing or strongly disagreeing. Neutral is 5.8%. Motivation stands out as a strong positive factor. Minimal dissent reinforces robust motivational practices overall.

Table 4.18 Table Showing Satisfied with Employer-Employee Relationship

Response	Frequency	Percent
Strongly Disagree	14	13.5
Disagree	23	22.1
Neutral	5	4.8
Agree	48	46.2
Strongly Agree	14	13.5
Total	**104**	**100.0**

Source: Primary data

Chart: 4.18 Chart Showing Satisfied with Employer-Employee Relationship

Source: Primary data

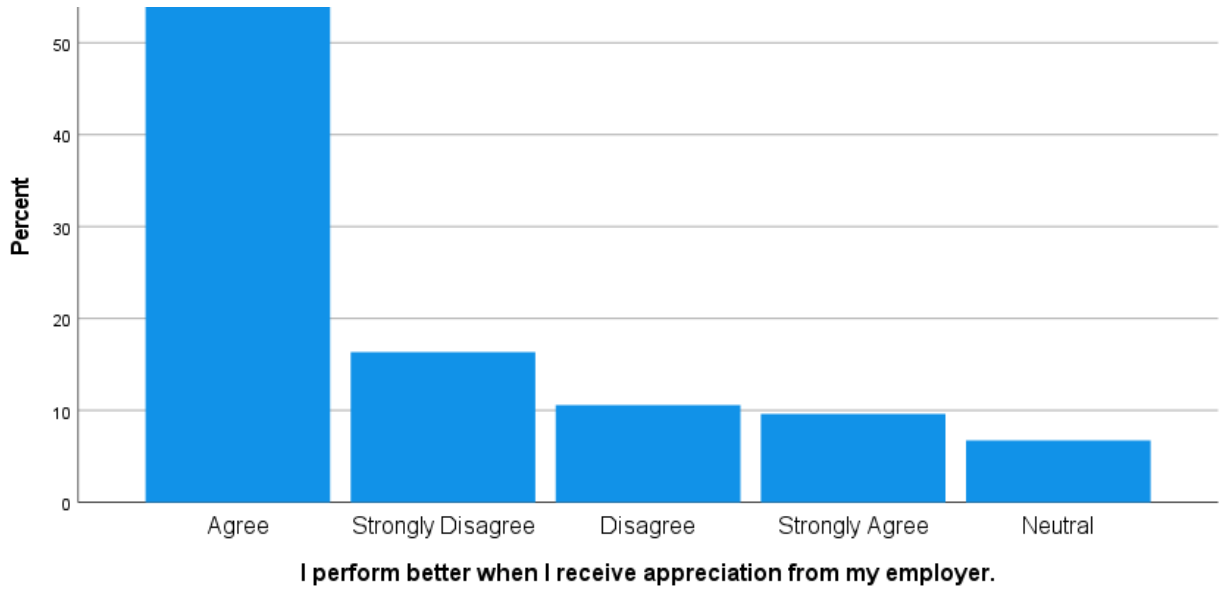

Interpretations From the above table, 59.7% (Agree + Strongly Agree) are satisfied with the relationship, while 35.6% disagree or strongly disagree. Neutral responses are 4.8%. A moderate majority express satisfaction. The high dissatisfaction level indicates relational strain in a notable portion.

Table 4.19 Table Showing Perform Better with Appreciation

Response	Frequency	Percent
Strongly Disagree	17	16.3
Disagree	11	10.6
Neutral	7	6.7
Agree	59	56.7
Strongly Agree	10	9.6
Total	**104**	**100.0**

Source: Primary data

Chart: 4.19 Chart Showing Perform Better with Appreciation

Source: Primary data

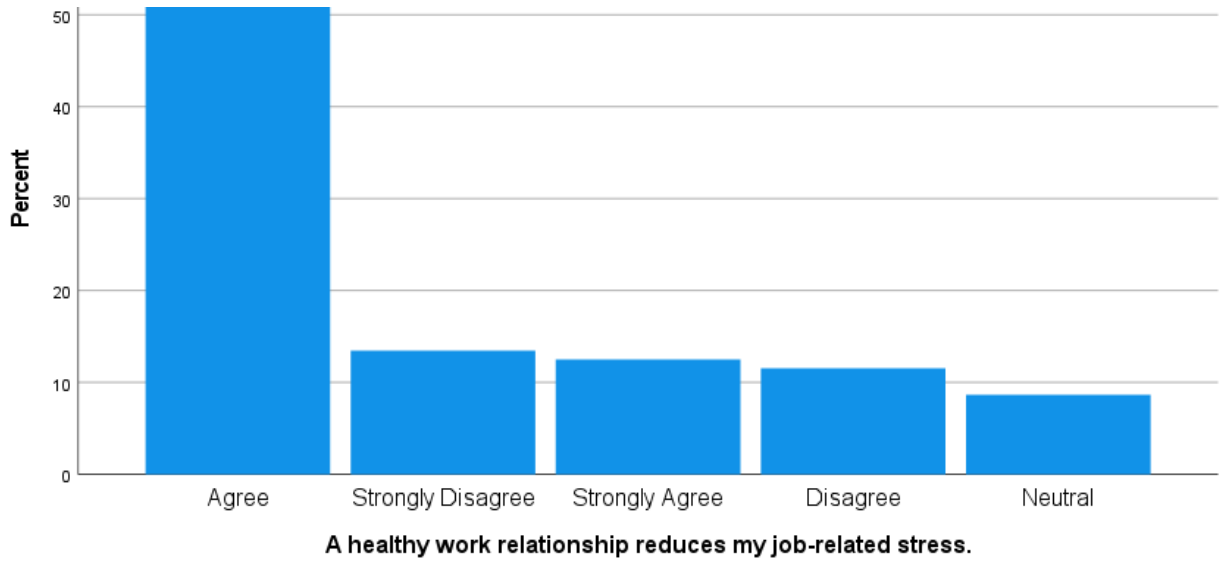

Interpretations From the above table, 66.3% (Agree + Strongly Agree) perform better when appreciated, against 26.9% who disagree or strongly disagree. Neutral is 6.7%. Appreciation clearly drives performance for most. A quarter not linking appreciation to output may reflect intrinsic motivation differences.

Table 4.20 Table Showing Healthy Work Relationship Reduces Stress

Response	Frequency	Percent
Strongly Disagree	14	13.5
Disagree	12	11.5
Neutral	9	8.7
Agree	56	53.8
Strongly Agree	13	12.5
Total	**104**	**100.0**

Source: Primary data

Chart: 4.20 Chart Showing Healthy Work Relationship Reduces Stress

Source: Primary data

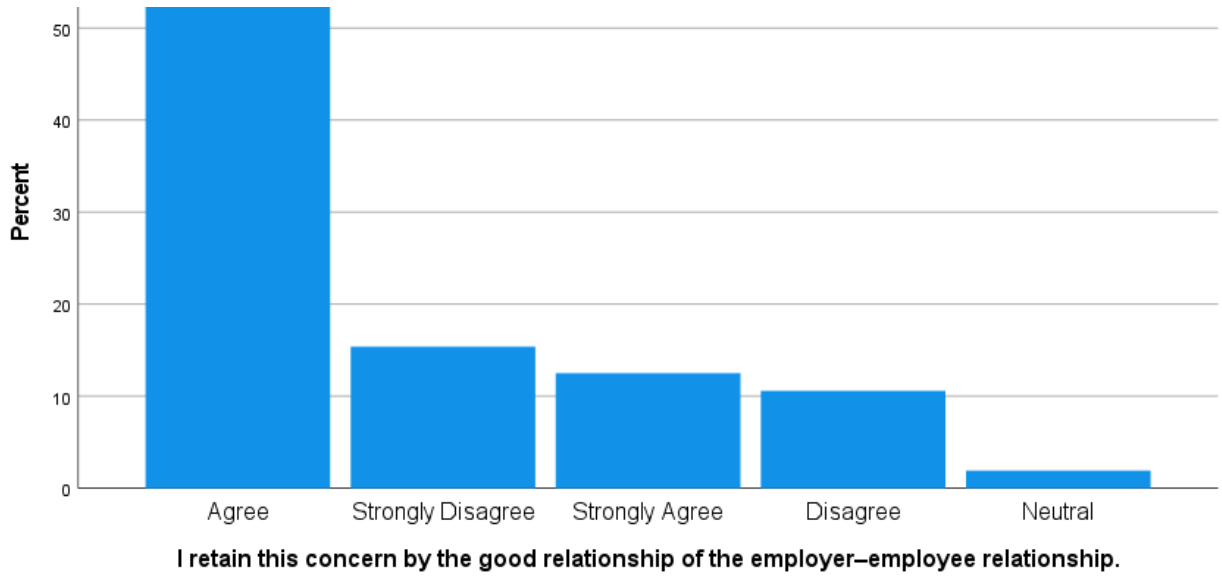

Interpretations From the above table, 66.3% (Agree + Strongly Agree) agree that healthy relationships reduce stress, while 25.0% disagree or strongly disagree. Neutral stands at 8.7%. Positive relationships are widely seen as stress relievers. The dissenting quarter may face other dominant stressors.

Table 4.21 Table Showing Retention Due to Good Employer-Employee Relationship

Response	Frequency	Percent
Strongly Disagree	16	15.4
Disagree	11	10.6
Neutral	2	1.9
Agree	62	59.6
Strongly Agree	13	12.5
Total	**104**	**100.0**

Source: Primary data

Chart: 4.21 Chart Showing Retention Due to Good Employer-Employee Relationship

Source: Primary data

Interpretations From the above table, 72.1% (Agree + Strongly Agree) attribute retention to good relationships, with 26.0% disagreeing or strongly disagreeing. Neutral is 1.9%. Relationship quality strongly influences loyalty for most. A significant minority stays despite relational gaps, possibly due to external factors.

Table 4.22 Table Showing Feel Valued as an Employee

Response	Frequency	Percent
Strongly Disagree	12	11.5
Disagree	11	10.6
Neutral	8	7.7
Agree	59	56.7
Strongly Agree	14	13.5
Total	**104**	**100.0**

Source: Primary data

Chart: 4.22 Chart Showing Feel Valued as an Employee

Source: Primary data

Interpretations From the above table, 70.2% (Agree + Strongly Agree) feel valued by the organization, while 22.1% disagree or strongly disagree. Neutral is 7.7%. A strong sense of value prevails among employees. The dissatisfied segment highlights areas were belonging needs reinforcement.

1. CORRELATION TEST:

Hypothesis H_0 (Null): There is no significant correlation between "My supervisor communicates clearly and openly" and "A healthy work relationship reduces my job-related stress."

H_1 (Alternative): There is a significant correlation between "My supervisor communicates clearly and openly" and "A healthy work relationship reduces my job-related stress."

Table 4.23 Correlation between Supervisor Communication and Stress Reduction

Correlations			
		My supervisor communicates clearly and openly.	A healthy work relationship reduces my job-related stress.
My supervisor communicates clearly and openly.	Pearson Correlation	1	-.002
	Sig. (2-tailed)		.981
	N	104	104
A healthy work relationship reduces my job-related stress.	Pearson Correlation	-.002	1
	Sig. (2-tailed)	.981	
	N	104	104

Source: Primary data

Interpretations: From the above table, the Pearson correlation coefficient is -.002 with a significance value of .981, which is greater than 0.05. This indicates a very weak and statistically insignificant relationship between clear supervisor communication and reduction in job-related stress. The null hypothesis (H_0) is accepted, confirming no meaningful association between the two variables. Employees' perception of communication clarity does not influence their stress levels through work relationships. This suggests that stress reduction may depend more on other relational or structural factors. Other aspects of the work environment likely play a stronger role in managing stress.

2. MULTIPLE REGRESSION TEST:

Hypothesis H_0 (Null): The predictors (appreciation, recognition happiness, and comfort in discussion) do not significantly explain variance in satisfaction with the employer-employee relationship.

H_1 (Alternative): The predictors significantly explain variance in satisfaction with the employer-employee relationship.

Table 4.24 Model Summary – Regression on Satisfaction with Employer-Employee Relationship

Model Summary				
Model	R	R Square	Adjusted R Square	Std. Error of the Estimate
1	.827[a]	.684	.674	.748

a. Predictors: (Constant), I feel comfortable discussing work-related issues., I receive appreciation and recognition from my employer., I am happy with the level of recognition.

Table 4.25 Coefficients – Predictors of Relationship Satisfaction

Coefficients						
Model		Unstandardized Coefficients		Standardized Coefficients	t	Sig.
		B	Std. Error	Beta		
1	(Constant)	.434	.269		1.614	.110
	I receive appreciation and recognition from my employer.	.103	.066	.097	1.564	.121
	I am happy with the level of recognition.	-.081	.089	-.074	-.906	.367
	I feel comfortable discussing work-related issues.	.831	.086	.833	9.706	.000
a. Dependent Variable: I am satisfied with employer-employee relationship.						

Interpretations: From the above tables, the model explains 68.4% of the variance in relationship satisfaction (R Square = .684), with an adjusted value of .674. Among predictors, only "I feel comfortable discussing work-related issues" is statistically significant ($p = .000$, Beta = .833). Appreciation and happiness with recognition show no significant impact ($p > .05$). The null hypothesis is rejected for discussion comfort but accepted for the other two. Open communication strongly drives satisfaction, while recognition mechanisms appear ineffective. Management should prioritize creating safe discussion platforms to enhance relational satisfaction.

3. ONE WAY ANOVA TEST

Hypothesis H_0 (Null): There is no significant difference in "A healthy work relationship reduces my job-related stress" across different groups (e.g., departments/designations).

H_1 (Alternative): There is a significant difference in perceived stress reduction across groups.

Table 4.26 ANOVA – Stress Reduction Across Groups

ANOVA					
A healthy work relationship reduces my job-related stress.					
	Sum of Squares	df	Mean Square	F	Sig.
Between Groups	5.418	4	1.354	.873	.483
Within Groups	153.621	99	1.552		
Total	159.038	103			

Source: Primary data

Interpretations From the above table, the F-value is 0.873 with a significance level of .483, which is greater than 0.05. This indicates no statistically significant difference in stress reduction perception across groups. The null hypothesis (H_0) is accepted, meaning employee groups experience stress reduction uniformly. Departmental or role-based variations do not influence this perception. Organizational policies on relationships likely have consistent impact across units. Uniform training or culture may be effectively implemented organization-wide.

CHAPTER V

FINDINGS , SUGGESTIONS & CONCLUSION

5.1 FINDINGS

- Majority of respondents (44.2%) are aged 20–30 years.
- 51.0% have only schooling as highest education.
- 45.2% are machine operators by designation.
- 40.4% work in the production department.
- 39.4% have 5–7 years of experience in the firm.
- 56.8% agree/strongly agree that supervisor communicates clearly and openly.
- 59.6% agree/strongly agree the work environment promotes teamwork.
- 64.4% agree/strongly agree they receive regular performance feedback.
- 65.3% agree/strongly agree conflicts are resolved effectively.
- 79.8% agree/strongly agree employer treats them with fairness and equality.
- 66.3% agree/strongly agree employer provides support and guidance.
- 75.9% agree/strongly agree employer shows respect toward employees.
- 66.3% agree/strongly agree they receive appreciation and recognition.
- 72.1% agree/strongly agree their opinions are valued by management.
- 70.2% agree/strongly agree they are happy with the level of recognition.
- 59.6% agree/strongly agree they feel comfortable discussing work issues.
- 78.8% agree/strongly agree employer motivates and supports effectively.
- 59.7% agree/strongly agree they are satisfied with employer-employee relationship.
- 66.3% agree/strongly agree they perform better with appreciation.
- 66.3% agree/strongly agree healthy work relationship reduces job stress.
- 72.1% agree/strongly agree good relationship drives retention.
- 70.2% agree/strongly agree they feel valued by the organization.
- No significant correlation ($r = -.002$, $p = .981$) between supervisor communication and stress reduction.
- Regression shows 68.4% variance in relationship satisfaction explained; only discussion comfort significant ($p = .000$).
- ANOVA shows no significant group difference ($F = .873$, $p = .483$) in stress reduction perception.

5.2 SUGGESTIONS

- Promote open and consistent communication between supervisors and employees to build trust.
- Strengthen team-building initiatives to foster collaboration across all departments.
- Implement regular performance feedback mechanisms to ensure continuous improvement.
- Establish fair and transparent conflict resolution processes to maintain harmony.
- Ensure equitable treatment and respect for all employees regardless of role or tenure.
- Provide ongoing support and guidance to help employees navigate challenges.
- Develop structured recognition programs to acknowledge contributions effectively.
- Encourage employee input and create channels for suggestions to be heard and acted upon.
- Create a safe environment for discussing work-related concerns without fear.
- Focus on motivational strategies that inspire and energize the workforce.
- Build strong employer-employee relationships to boost overall satisfaction.
- Link appreciation and recognition directly to performance improvement efforts.
- Cultivate healthy work relationships to help reduce job-related stress.
- Reinforce positive relational practices to support employee retention.
- Make employees feel valued through meaningful engagement and inclusion.

5.3 CONCLUSION:

The study reveals a predominantly young and operationally focused workforce, emphasizing the pivotal role of employer-employee relationships in organizational dynamics. Clear supervisory communication, fair treatment, and respect emerge as foundational strengths, fostering a supportive environment that enhances motivation and overall satisfaction. Employees perceive value in open dialogue and recognition, which significantly drives performance and retention while mitigating job stress. Regression analysis underscores that comfort in discussing issues is the strongest predictor of relational satisfaction, highlighting communication as a key lever for improvement. No notable correlations or group differences in stress reduction indicate uniform relational impacts across demographics. The findings affirm that nurturing these relationships cultivates a harmonious, productive workplace. Ultimately, prioritizing equitable support and inclusive practices strengthens loyalty and efficiency. This research provides actionable insights for sustainable HR strategies. Organizations can leverage these elements to build resilient teams. In conclusion, robust employer-employee bonds are essential for long-term success and employee well-being.

- **According to Murphy (2024**) – Advocated for fostering a growth mindset within organizations to promote innovation and ethical behaviour, highlighting its positive effect on employer- employee relationships
- **According to Venkataraman (2023)** – Provided a critical reflection on employment relations in India, emphasizing the need for a sociologically informed understanding of employer-employee dynamics.
- **According to Otoo (2022)** – Examined HR development practices' impact on organizational commitment in SMEs, finding that effective HRD initiatives. A significant influence of HRD practices on continuance commitment was observed. A non-significant influence of HRD practice on normative commitment was reported.
- **According to Guntuku et al. (2022)** – Examined the effect of employer-employee relationships on engagement and task performance, finding a significant positive correlation between strong relationship enhanced engagement.casopisi.junis.ni.ac.rs. To investigate the association between the dependent variables "employee engagement" and "task performance"
- **According to Dr. K.R. Subramanian (2019),** had done research on the topic ―Employer employee relationship and impact on organization structure and strategy. The objective of study to identify impact of relationship between employee-employer in the organization.
- **According to Zuraina data Mansor and Saitaifah adman (2015),** had done research on the topic ―the influence of employer's behaviour, communication and psychological ownership in promoting the employee-employer relationship in small and medium sized enterprises.
- **According to Stroh Meier, S. (2013)** In his study said that worker relationship management constitutes an rising fashion of dealing with human assets thru constructing and retaining individualized and collectively precious relationships with personnel based totally on data technology.
- **According to Sadikoglu .E., & Zehir .C (2010),** They positioned that investigating the consequences of innovation and employee usual overall performance on the between standard first-class manipulate practices and company ordinary overall performance.

Questionnaire:

I am chandru .m, studying MBA II year in Sri Malakula Vinayagar Engineering College, doing the project on the title ,"A Study on employer-employee relationship and its impact on employee performance kindly spare your valuable time in filling up this questionnaire. The information gathered will be used for academic purpose only and will be kept confidential.

DEMOGRAPHIC QUESTIONS:

1. **Name (Optional): _____**

2. **Age group:**

   ☐ Below 20 ☐ 20–30 ☐ 31–40 ☐ 41–50 ☐ Above 55

3. **Educational qualification:**

   ☐Schooling ☐ Diploma/ITI ☐ Graduate ☐ Post graduate

4. **Designation:**

   ☐Machine operator ☐Line supervisor ☐ Technician ☐ Quality Inspector
   ☐ Workers

5. Department:

   ☐Production ☐Quality Control ☐Administrative ☐Maintenance

6. **Experience in the firm:**

   ☐ Less than 1 year ☐ 1–3 years ☐ 3–5 years ☐ 5-7 years ☐ More than 7 years

Scale: 1= Strongly agree, 2= Agree, 3=Neutral, 4= Disagree, 5= Strongly disagree.

Sl.No	Statement	1	2	3	4	5
7.	My supervisor communicates clearly and openly.					
8.	The work environment promotes teamwork.					
9.	I receive regular feedback on my performance.					
10.	Conflicts between employees resolved effectively .					
11.	My employer treats with fairness and equality.					
12.	My employer provides support and guidance.					
13.	My employer shows respect toward employees.					
14.	I receive appreciation and recognition from my employer.					
15.	My opinions and suggestions are valued by management.					
16.	I am happy with the level of recognition.					
17.	I feel comfortable discussing work-related issues.					
18.	My employer motivates and supports effectively.					
19.	I am satisfied with employer-employee relationship.					
20.	I perform better when I receive appreciation from my employer.					
21.	A healthy work relationship reduces my job-related stress.					
22.	I retain this concern by the good relationship of the employer–employee relationship.					
23.	I feel valued as an employee by my organization.
